PROFESSIONAL SUMMARY

Python Backend Developer with around **2 years of hands-on experience** designing and delivering production-grade web applications, RESTful APIs, and automated data pipelines. At Kalki Fashion, built and owned key internal systems — including an Order-to-Dispatch platform and an Inventory Management System — that directly reduced order processing time by **40%** and cut operational errors by **50%**. Equally comfortable working across the backend stack: from **Django, FastAPI and PostgreSQL** on the server side to **Pandas, NumPy, and Power BI** for data automation and business intelligence. PSM I certified with a strong foundation in Agile delivery. Currently deepening expertise in Generative AI through the IBM Professional Certificate.

TECHNICAL SKILLS

Languages:	Python, SQL, JavaScript
Frameworks & Libraries:	FastAPI, Flask, Django, Pandas, NumPy, Streamlit
Databases:	PostgreSQL, MySQL, Neon PostgreSQL
APIs & Auth:	REST API Design, JWT Authentication
Tools & Platforms:	Power BI, Git, Linux, Streamlit Cloud, Google Sheets API
Methodologies:	Agile, Scrum

PROFESSIONAL EXPERIENCE

Web Application Developer | Kalki Fashion Pvt. Ltd.

Apr 2024 – Jan 2026

Order-to-Dispatch Web Application

Tech Stack: Python, FastAPI, Django, PostgreSQL, JWT, jQuery, REST API

- **Architected and deployed a full-stack Order-to-Dispatch platform** using FastAPI and PostgreSQL, covering the complete workflow from order entry to warehouse dispatch.
- Integrated **JWT-based authentication** across all API endpoints and developed jQuery-enhanced frontend components for internal operational tools.
- Reduced end-to-end order processing time by **40%**, with **100% adoption** across all operational teams within the first month of deployment.
- Designed structured relational schemas using Django ORM-style modelling patterns to support order lifecycle tracking and dispatch workflow automation.

Inventory Management System

Tech Stack: Python, MySQL, FastAPI, REST API

- **Designed and built a multi-user Inventory Management System** on MySQL, engineered to handle concurrent access reliably across the organisation.
- Implemented role-based access, stock-level tracking, and automated reorder triggers, directly reducing operational errors by **50%** and supporting **150+ concurrent users** without degradation.

Data Synchronisation & Reporting Pipeline

Tech Stack: Python, Pandas, NumPy, MySQL, Google Sheets API, Power BI

- **Automated bi-directional data synchronisation** between Google Sheets, Excel, and MySQL using Python and Pandas, eliminating manual reconciliation and creating a centralised, audit-ready data source.
- Performed **data wrangling, transformation, and numerical processing** using NumPy and Pandas across multiple business reporting pipelines.

- Built real-time **Power BI dashboards** with live API data integration, improving management visibility into supply chain KPIs and operational performance.

PROJECTS

Exchange-Style Market Surveillance Dashboard

Apr 2026

A cloud-based financial market surveillance platform simulating NSE/BSE exchange monitoring workflows, covering anomaly detection, risk scoring, and compliance-style reporting.

Tech Stack: Python, Pandas, NumPy, PostgreSQL (Neon Cloud), Streamlit

- **Automated NSE Bhavcopy ingestion** via Python batch scripts and built volatility, liquidity, and price-shock anomaly detection algorithms using Pandas and NumPy.
- Engineered a **symbol-level and sector-level risk scoring engine** backed by Neon PostgreSQL, with persistent historical alert storage enabling repeat-offender detection.
- Deployed an interactive **Streamlit investigation dashboard** on Streamlit Cloud, providing compliance-style reporting and drill-down investigation capabilities.
